(54) Title: PATIENT IDENTIFICATION METHOD FOR X-RAY FILM USER-INTERFACES

(57) Abstract: A method for identifying digitized X-ray films using the label that is "burned" on such films. The label is digitized and can be used as a single identifier for the corresponding X-ray film image. The digitized label can be displayed such as to be readable by the user thereby allowing the selection and retrieval of the image. The digitized label can also be associated with image analysis results, such as CAD analysis, performed on the corresponding X-ray film image allowing easy retrieval of such results.
